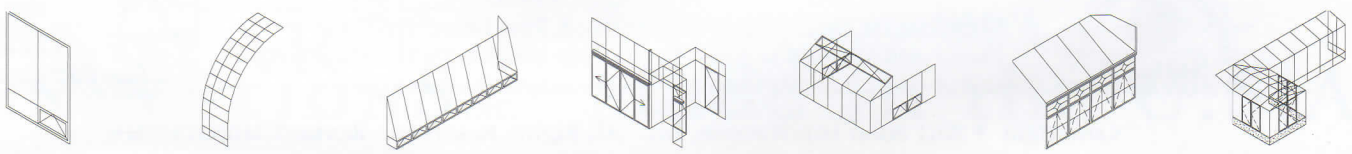
New Products

Lift Slide doors provide a smooth ride alternative to traditional patio doors. These units are controlled with the simple flick of the wrist and a push of the arm. Turning the handle allows the unit to move by lifting the door and removing the pressure on the gaskets, allowing for easy mobility. Simply turning the handle down again reseals the door and provides security and thermal performance.


Pivot door hinges are located at the top and bottom of the frame. This location allows the door to pivot left to right. Each door's pivot point is custom located by request; center and off-center pivot locations are available. These units are an excellent selection for applications that require a large opening with less floor space interuption.
